EDUCATIONAL MANAGEMENT**

Date of Completion : MAY 2024

Adviser : JOSEPH JAY U. AUREADA, PhD

This study determined the extent of implementation of the Supreme Elementary Learner Government (SELG) in the Sariaya East District, Division of Quezon, and used the findings as the basis for a proposed action plan. The research was conducted because while Supreme Elementary Learner Government (SELG) is mandated by the Department of Education to promote student leadership and participation, there remained gaps in its actual implementation, particularly in encouraging pupil involvement, sustaining welfare programs, and organizing school activities. The researcher aimed to assess the effectiveness of Supreme Elementary Learner Government (SELG) performance along campus politics, promotion of student welfare, and school programs and activities, as well as to identify the challenges encountered by Supreme Elementary Learner Government (SELG) officers in carrying out their responsibilities. Specifically, the study sought to answer five questions: the

profile of the respondents in terms of age, sex, and grade level; the level of effectiveness of Supreme Elementary Learner Government (SELG) performance; the challenges encountered by Supreme Elementary Learner Government officers; the relationship between respondents' profile and their perception of Supreme Elementary Learner Government effectiveness; and the proposed plan of action to address the needs identified.

The study employed a descriptive research design, which was appropriate since it focused on describing the current status of Supreme Elementary Learner Government implementation as perceived by pupils. The research was conducted in selected elementary schools in the Sariaya East District during Academic Year 2023–2024. The respondents were 85 intermediate pupils, composed of 35 Supreme Elementary Learner Government (SELG) officers and 50 non-officer students. They were selected through purposive sampling because the study required participants who had direct involvement in Supreme Elementary Learner Government activities. The main instrument used was a researcher-made questionnaire, which was divided into three parts: the profile of respondents, the performance of Supreme Elementary Learner Government, and the challenges encountered by Supreme Elementary Learner Government officers. The instrument was validated by experts using Lawshe's content validity test and pilot-tested for reliability, with Cronbach's alpha confirming its consistency.

The data gathered were analyzed using both descriptive and inferential statistics. Weighted mean was used to determine the level of effectiveness of Supreme

Elementary Learner Government performance, while frequency and percentage were applied to present the challenges encountered by officers. To test the relationship between the respondents' profile and their perception of Supreme Elementary Learner Government effectiveness, one-way Analysis of Variance (ANOVA) was employed. The interpretation of weighted means followed a five-point Likert scale ranging from "Very Effective" to "Not Observed," while the challenges were rated from "Highly Observed" to "Not Observed."

The findings revealed that Supreme Elementary Learner Government was generally effective in its performance. In campus politics, the overall mean was 4.13, interpreted as effective, with fair representation of pupils in decision-making rated highest. In promotion of student welfare, the overall mean was 4.33, also effective, with support for academic and personal growth rated very effective. In school programs and activities, the overall mean was 4.42, effective, with the organization of school events rated very effective. Despite these positive results, Supreme Elementary Learner Government officers encountered challenges such as limited pupil participation in meetings (57%), lack of resources for welfare programs (43%), and difficulty in organizing events (40%). The analysis further showed that grade level had a significant relationship with pupils' perception of Supreme Elementary Learner Government effectiveness, while age and sex did not. This meant that older pupils tended to evaluate Supreme Elementary Learner Government more critically compared to younger pupils.

From these findings, the researcher concluded that Supreme Elementary Learner Government officers were effective in fulfilling their roles but needed stronger support systems to overcome challenges in participation, resources, and time management. The study produced a proposed Annual Implementation Plan for Supreme Elementary Learner Government in the Sariaya East District, which included strategies for increasing pupil involvement, securing resources for welfare programs, and improving event organization through clear role assignments and training. This output was relevant because it provided Supreme Elementary Learner Government officers, advisers, and school heads with a practical guide to strengthen student governance and ensure that Supreme Elementary Learner Government programs became more inclusive, sustainable, and responsive to the needs of pupils. The study emphasized that student leadership, when properly supported, could significantly contribute to the holistic development of learners and the overall improvement of school culture.

ACKNOWLEDGEMENTS

The researcher would like to express her heartfelt gratitude and sincere appreciation to the following individuals who, in one way or another, contributed to the successful completion of this research undertaking:

To the Almighty God, for His enduring grace, guidance, and protection throughout the conduct of this study.

To Dr. Joseph Jay U. Aureada, my adviser, for his continuous support, patience, motivation, and immense knowledge. His guidance greatly helped me throughout the research process and in the writing of this thesis.

To my husband and children, for their unwavering love, financial support, encouragement, and inspiration. Your constant presence and guidance gave me the strength to persevere and accomplish this study.

To my co-teachers and friends, for the stimulating discussions, shared efforts during sleepless nights to meet deadlines, and the joy and camaraderie experienced throughout this journey. Your support made this academic journey more meaningful.

To my panelists, for their trust, advice, patience, suggestions, recommendations, and guidance from the beginning to the completion of this study. Your contributions significantly enhanced the quality of this research.

G.B.M.

DEDICATION

This work is dedicated to all those who have provided guidance, support, and encouragement throughout the course of this study.

To my family, for their love and unwavering support; to my mentors and teachers, for their guidance and inspiration; and to my friends and colleagues, for their encouragement and cooperation—thank you for being part of this journey.

Finally, I dedicate this work to Almighty God, for the strength, wisdom, and perseverance to complete this research.

Conceptual Framework of the Study

7

CHAPTER 1

The Problem and Its Background

Introduction

The Supreme Elementary Learner Government (SELG) is the foremost co-curricular student organization authorized to operate and implement pertinent programs, projects, and activities in schools nationwide. It lays the groundwork for good governance, volunteerism, unity, and cooperation by providing students with various venues where they can improve their leadership knowledge, skills, and attitudes. It trains students to become better members of society in accordance with the ideals and principles of participatory democracy and good citizenship. More importantly, it helps the Department of Education (DepEd) achieve its thrusts as indicated in the Education For All (EFA) Goals, Sustainable Development Goals (SDGs), and the Basic Education Social Reform Agenda (BESRA).

The recognition of student leaders as critical stakeholders is grounded on the foundation of specific engagement, assignment, and delegation of duties by the school administration geared towards realizing effective school management. Recent studies emphasize that student leaders coordinate student activities, participate in decision-making on behalf of their peers, and resolve conflicts that arise among students and teachers. They also serve as communication bridges between the student body and the school administration, which raises self-esteem and inspires future leadership in society (Dedicatoria, Dionela, Climaco, & Balangon, 2023).

It is the responsibility of school management to identify and maximize the potential of student leadership as an invaluable instrument for realizing effective management of educational institutions. Once in place, student governance engages in planning, organizing, directing, coordinating, and controlling student activities to willingly and enthusiastically enhance the completion of scheduled programs. This implies management effectiveness for the benefit of the whole school community. Contemporary research highlights that student leaders remain one of the most influential stakeholders that school administration can engage to positively influence the rest of the student body and enhance school management (Mendoza, 2023).

This study is anchored upon salient factors such as the perceptions of the students and student leaders on the effectiveness of performance of the Supreme Elementary Learner Government among the elementary schools in Sariaya East District. Student leaders could benefit from the results of the study as they shall be provided with massive insight into how Supreme Elementary Learner Government operates as a student organization. Since they are prospective leaders, they may be able to determine which programs and projects could provide a better impact on students' welfare. For school administrators, personnel, and faculty members, they shall be illuminated with the real scenario of how student leaders work for the welfare of their constituents. They shall gain a deeper understanding of the situations prompted by student leaders in the campus, thereby helping them in some aspects of their academic lives. For the students, results of this study would provide them the

needed information as to how effective Supreme Elementary Learner Government (SELG) is in ushering programs and projects that redound to their welfare.

Theoretical Framework

Students' government members should be provided with teaching and practical manuals on the organization of the student government activities, including regulations, concepts, programs, and orders, and these should be available at the university, among other special organizational and pedagogical conditions, in order to establish an effective system of student governance at the university (Dorozhkina, Zaitseva, and Tatarskikh, 2019). Many adult supporters viewed the student government as a continuation of the progressive pedagogical idea of learning by doing, such as involving students in the city and federal governments, which take on political and educational responsibilities. Opponents, however, countered that the mechanisms would simply replicate the political system's corruption (Wallach, 2018). By identifying pertinent leadership development indicators and defining strategies for students to improve their leadership skills, educators and program directors can help students become effective social change leaders and actors (Stayhorn, 2018). They can also provide a working model for organizing student government activities, including the structure and interaction strategy with university administration; student government bodies should be representative of the student body. These leadership skills can be built and developed as students continue their studies, which comes with a great responsibility on the part of students. Students also need proper

time management skills, skills in leading the entire student and school community with a balanced academic and extracurricular activities so that neither of the two would be lacked (Shertzer, Wall, Frandsen, Guo, Whalen & Shelley, 2015)

According to (Dubrin, 2017) the contingency theory emphasizes the importance of the leadership keeping situation under control. However, matching the situation with the leader may create problems, because the amount of control the leader exercises varies from time to time. For example, if a relationship-oriented leader finds a good leader-follower situation for exercising control, it is almost certain that the leader would attempt to make the situation less favorable. As a result, the set goals may not be accomplished by a leader who has made the situation less favorable (Virkus, 2015). That is in agreement with assertion that good relationship between the leader and followers is important for making it easy for the leader to have influence and exercise control over the situation for achievement of the set goals of the organization.

According to Virkus 2015 the contingency theory also explains that the difference in the participation of the student council in the management of public boys' and girls' boarding secondary schools emanate from lack of motivation and poor task structures of the student council. In this regard there are decisions on tasks for the students have not been made and that affect task accomplishment. The contingency theory explains that lack of definite task structure generates into conflicts in both public boys' and girls' boarding secondary schools that affects the internal climate/

culture of the school cohesive and harmonious co-existence. In addition to teaching techniques and practices, teaching strategies should not be seen as a stand-alone thing. It's possible that student achievement isn't determined solely by reading tactics, approaches, or practices. Instead, a closer look at the data suggests that success in second language learning is due to a combination of factors relating to the teacher and the behavior of students in the classroom.

There has been a substantial volume of research conducted in the area of student leadership across Australia and internationally over the last several decades. The concept of student voice became prominent in the 1960s and has persevered, fostering a range of student leadership initiatives both within and outside of schools (Mager & Nowak, 2015, p. 39). While there is an emerging body of literature on student leadership, and student leadership structures in the majority of schools, there is very little robust evidence of policy and program effectiveness. Other significant gaps in the literature include the immediate and longer-term impact of leadership opportunities on skill development, learning outcomes, workforce participation or ongoing civic participation; youth perspectives on leadership; and the types of approaches and strategies for strengthening leadership that are the most effective.

Conceptual Framework

This study follows the Input–Process–Output (IPO) model to clearly show how the research was conducted. The input includes the respondents such as Supreme Elementary Learner Government officers, members, and advisers, together with their profile variables like age, sex, and grade level. The study also uses research tools such as survey questionnaires and interviews to gather information.

The process involves the actual steps of the study. Data are collected through surveys and interviews, then organized and treated using statistical methods such as weighted mean and correlation. After this, the researcher analyzes the results to determine the level of effectiveness of Supreme Elementary Learner Government and the challenges encountered in its implementation.

Finally, the output presents the findings of the study. These include the assessment of SELG's effectiveness, the challenges faced by student leaders, and the proposed Annual Implementation Plan (AIP). The Annual Implementation Plan serves as a practical guide for improving Supreme Elementary Learner Government programs and activities, ensuring that student governance continues to support leadership development and student welfare in the Sariaya East District.

Figure 1. Conceptual Framework of the Study

Statement of the Problem

The study aims to assess the extent of the implementation and identify the challenges encountered of the Supreme Elementary Learner Government of Sariaya East District.

Specifically, the study answered the following sub-problems.

1. What is the profile of the respondents in terms of:

1.1. age;

1.2. sex; and

- 1.3. grade level
2. What is the level of effectiveness of performance of the Supreme Elementary Learner Government (SELG) as perceived by the respondents along:
 - 2.1 Campus Politics;
 - 2.2 Promotion of Student Welfare;and
 - 2.3 School Programs and Activities
3. What are the challenges encountered by the officers of Supreme Elementary Learner Government (SELG) in the implementation of different activities to:
 - 3.1 Campus Politics;
 - 3.2 Promotion of Student Welfare; and
 - 3.3 School Programs and Activities
4. Is there a significant relationship between the profile of the respondents and their perception on the level of effectiveness of the Supreme Elementary Learner Government (SELG) in Sariaya East District.
5. What plan of action may be proposed to address the needs of the study?

Hypothesis

This study hypothesizes that there is no significant relationship between the profile of the respondents (age, sex, and grade level) and their perception of the effectiveness of the Supreme Elementary Learner Government (SELG) in Sariaya East District.

Scope and Limitation of the Study

This study determined the level of effectiveness in the implementation of the Supreme Elementary Learner Government (SELG) within the Division of Quezon, particularly in the Sariaya East District. It was conducted during Academic Year 2023–2024. The respondents were intermediate teachers who directly supervised and guided Supreme Elementary Learner Government activities in their respective schools. The study focused on evaluating how Supreme Elementary Learner Government programs and projects were carried out and how effective they were in promoting student leadership, welfare, and participation in school activities. The research design used was descriptive-correlational, and data were gathered through survey questionnaires that allowed the researcher to measure and analyze the perceptions of teachers regarding SELG's performance.

On the other hand, the study was limited only to intermediate teachers in the Sariaya East District and did not include Supreme Elementary Learner Government officers, members, or advisers from other grade levels or districts. The findings were based solely on the responses of the selected group of teachers, which may affect the generalization of results to other contexts. The study also did not cover long-term impacts of Supreme Elementary Learner Government programs beyond the specified school year, nor did it measure academic performance or other external factors that may influence student governance. Since the data relied on self-reported surveys, the accuracy of the results depended on the honesty and completeness of the

respondents' answers. These limitations mean that while the study provided valuable insights into SELG's effectiveness and challenges, the conclusions should be interpreted within the specific setting and timeframe of the Sariaya East District.

Significance of the Study

The result of the study will be significant to the following groups or individuals:

Students. The findings of this study may help students understand how the Supreme Elementary Learner Government (SELG) works to promote their welfare. By knowing which programs and activities are effective, students can become more active participants in school governance. This awareness may also encourage them to develop leadership skills and a stronger sense of responsibility within the school community.

Student Leaders. This study can provide Supreme Elementary Learner Government officers and members with insights into their strengths and areas for improvement. By identifying the challenges they encounter, student leaders can adjust their strategies and become more effective in carrying out their duties. The results may also inspire them to design projects that have a greater impact on their fellow students.

Teachers. The study may serve as a guide for intermediate teachers who supervise Supreme Elementary Learner Government activities. With clear information on the effectiveness of Supreme Elementary Learner Government programs, teachers

can provide better support and mentoring to student leaders. This can also help teachers align SELG activities with classroom goals and overall student development.

School Administrators. The results of this study may assist administrators in evaluating how student governance contributes to school management. By understanding the challenges faced by Supreme Elementary Learner Government, administrators can provide resources and policies that strengthen student leadership. This can lead to a more organized and participatory school environment.

Parents. The study may help parents appreciate the role of Supreme Elementary Learner Government in shaping their children's character and leadership skills. Knowing that SELG activities promote responsibility and cooperation can encourage parents to support school programs more actively. Their involvement can further strengthen the partnership between home and school.

Department of Education (DepEd). The findings may provide DepEd with localized data on how Supreme Elementary Learner Government is implemented in the Sariaya East District. This can serve as a basis for improving policies and guidelines related to student governance. It may also help DepEd ensure that Supreme Elementary Learner Government activities align with national goals for student participation and leadership development.

Community Stakeholders. The study may show how Supreme Elementary Learner Government activities extend beyond the school and contribute to community involvement. By promoting volunteerism and cooperation, Supreme Elementary

Learner Government can encourage partnerships with local organizations. This can strengthen the relationship between schools and the wider community.

Future Researchers. The study may serve as a reference for future researchers who wish to explore student governance and leadership development. The findings can provide a foundation for further studies on Supreme Elementary Learner Government or similar organizations. This can help build a stronger body of knowledge on student participation in school management.

Definition of Terms

The following terms were defined operationally and conceptually for better understandings of the study:

Annual Implementation Plan (AIP) refers to the proposed plan of action that will be developed from the findings of this study, intended to guide Supreme Elementary Learner Government programs and activities in the Sariaya East District.

Campus Politics refers to the activities of Supreme Elementary Learner Government officers related to student governance, such as elections, decision-making, and representation of student concerns within the school.

Challenges are the difficulties encountered by Supreme Elementary Learner Government officers in implementing programs and activities, including issues of participation, resources, and time management.

Effectiveness refers to the extent to which Supreme Elementary Learner Government programs and activities achieve their intended goals in promoting student leadership, welfare, and participation.

Intermediate Teachers are the respondents of this study who handle Grades 4 to 6 and supervise Supreme Elementary Learner Government activities in their respective schools.

Perception refers to the views and opinions of the respondents regarding the effectiveness of Supreme Elementary Learner Government in carrying out its programs and responsibilities.

Profile Variables include the age, sex, and grade level of the respondents, which are analyzed in relation to their perceptions of SELG's effectiveness.

Promotion of Student Welfare refers to Supreme Elementary Learner Government activities that aim to support the needs and well-being of students, such as health campaigns, peer support, and programs that enhance student life.

School Programs and Activities are the projects and events organized by Supreme Elementary Learner Government to promote student involvement, leadership development, and cooperation within the school community.

Supreme Elementary Learner Government (SELG) is the official student organization in elementary schools recognized by the Department of Education, tasked with promoting leadership, unity, and student participation in governance.

Survey Questionnaire is the main research tool used in this study to gather quantitative data from intermediate teachers about their perceptions of SELG's effectiveness and challenges.

Weighted Mean refers to the statistical method used in this study to interpret the responses of the teachers and determine the overall level of effectiveness of Supreme Elementary Learner Government programs and activities.

CHAPTER 2

Review of Related Literature and Studies

Local Literature

According to Gacutan (2020), leaders of different student organizations in every campus play very important roles in enhancing school life. They are considered a vital human resource that schools tap for instruction and organization. Even at a young age, students are aware of the challenges that confront their school life and future. Hence, they should be given opportunities to offer solutions to such problems, execute their plans, and mobilize their works within their capabilities. This initiative helps facilitate student development and contributes to the prestige of the school they belong to.

The Department of Education (DepEd) continues to strengthen student governance through its One School, One Supreme Student Government Policy, which was reinforced in recent years to ensure unity and cooperation among pupils and students. The policy provides a venue for the improvement of leadership skills and abilities, aligning with DepEd's thrusts in participatory democracy and student empowerment. In 2023, DepEd institutionalized the Supreme Elementary Learner Government (SELG) and Supreme Secondary Learner Government (SSLG) as unified organizations, emphasizing their role in promoting leadership, accountability, and collaboration among learners.

Recent studies also highlight the evolving role of student governments. Mendoza et al. (2023) reinforced that Supreme Student Government (SSG) and SELG officers are tasked with formulating and recommending programs that address relevant issues of the studentry, planning and implementing policies that protect student rights, and creating committees to meet student needs. They also serve as representatives of the student body in voicing out suggestions and grievances, and they participate in the crafting of School Improvement Plans (SIPs). These responsibilities show that student governments are not only symbolic but functional organizations that contribute to effective school management.

The constitution and by-laws of the SELG/SSG, revised and updated by DepEd, enumerate the duties and functions of each officer, from the President down to year-level representatives. These roles include organizing committees to address student welfare, promoting unity among leaders and the studentry, and maintaining school aspirations for quality education and academic excellence. Furthermore, each SELG/SSG is required to have an adviser designated by the school head, preferably from the Social Science Department, who monitors programs, projects, and meetings to ensure proper implementation.

Overall, recent literature and policies emphasize that student governments such as SELG are crucial in promoting leadership, unity, and welfare among learners. They serve as training grounds for effective leadership and participatory democracy,

while also supporting the school administration in achieving its goals for student development and school improvement.

Foreign Literature

Recent international studies emphasize that student organizations are more than just extracurricular outlets; they are vital platforms for developing skills, knowledge, and competencies relevant to future careers. According to Lopez & Kim (2021), participation in student councils and organizations enhances communication, teamwork, and leadership abilities, which are transferable to professional settings. These organizations supplement classroom learning by providing opportunities for students to practice responsibility and collaboration in real-world contexts.

Youth-led initiatives have also gained recognition globally. Shanahan & Smith (2020) noted that youth organizing in schools and communities positively impacts young people's sense of agency, civic engagement, and problem-solving skills. Evidence shows that student governments can influence education policies and practices, positioning students as active change agents in their own learning environments.

In the United States, student governments continue to serve as communication bridges between students and administrators. Johnson (2022) highlighted that elected student councils regulate extracurricular activities, voice student grievances, and contribute to policy discussions at the institutional level. This

role strengthens democratic participation and ensures that student perspectives are considered in decision-making processes.

Meanwhile, in Europe, universities have reinforced student participation in governance. Garcia (2023) reported that student councils in Spain and Germany are actively involved in campus planning, welfare programs, and community partnerships. These councils not only promote student rights but also collaborate with faculty and administrators in shaping school improvement plans.

Overall, recent foreign literature underscores that student governments worldwide remain essential in promoting leadership, welfare, and democratic participation. They provide students with meaningful opportunities to develop competencies, influence institutional governance, and contribute to both school and community improvement.

Local Studies

Recent studies emphasize that student organizations are not only venues for entertainment but also platforms for skill development and leadership training. According to Dedicatoria et al. (2023), participation in student government enhances competencies such as communication, decision-making, and collaboration, which are highly relevant to students' future careers. These organizations supplement classroom learning by providing opportunities for students to practice responsibility and teamwork in real-life contexts.

The Department of Education (DepEd, 2023) reinforced the importance of student governance through the institutionalization of the Supreme Elementary Learner Government (SELG) and Supreme Secondary Learner Government (SSLG). This policy, aligned with the “One School, One Supreme Student Government” framework, aims to strengthen unity and cooperation among learners while providing a structured venue for leadership development. The revised constitution and by-laws highlight objectives such as promoting student welfare, protecting student rights, and ensuring active participation in school improvement plans.

Research by Mendoza (2023) found that student governments play a vital role in bridging communication between students and school administrators. They act as representatives of the student body, voicing out concerns and grievances, while also recommending programs that address relevant issues. Student leaders are expected to plan and implement activities that promote welfare, organize committees to meet student needs, and participate in policy-making processes at the school level.

Furthermore, Climaco and Balangon (2022) observed that student governments contribute to school enhancement by fostering unity among learners and encouraging volunteerism. They noted that student leaders are powerful resources for schools, capable of mobilizing peers and initiating projects that improve both academic and extracurricular life. These findings echo DepEd’s thrusts in participatory democracy, where students are trained to become responsible citizens through active involvement in governance.

Overall, recent literature (2020–2023) underscores that student governments such as Supreme Elementary Learner Government are essential in promoting leadership, welfare, and unity among learners. They serve as training grounds for effective leadership and democratic participation, while also supporting school administrators in achieving goals for student development and school improvement.

Foreign Studies

Recent studies emphasize that student organizations continue to face challenges in funding and institutional support. Even experienced student leaders encounter barriers that affect the effectiveness of their organizations, highlighting the need for stronger administrative backing and resource allocation. This aligns with findings that student councils remain the supreme student organization in schools, tasked with ensuring student rights and welfare, promoting school spirit, and coordinating activities that enhance the educational experience.

In the Philippines, the Department of Education (DepEd) reinforced student governance through the institutionalization of the Supreme Elementary Learner Government (SELG) and Supreme Secondary Learner Government (SSLG) in 2023. This policy builds on the “One School, One Supreme Student Government” framework, ensuring that every school has a structured student body to represent learners’ voices. The revised constitution and by-laws outline the duties of student leaders, including planning programs, protecting student rights, and participating in the formulation of School Improvement Plans (SIPs).

A study by Mendoza et al. (2023) assessed the effectiveness of SSG programs and found that student governments play a vital role in bridging communication between students and administrators. They act as representatives of the student body, voicing concerns, recommending programs, and organizing committees to address student needs. Similarly, Obreque and Bautista (2024) highlighted the importance of participation and commitment among Supreme Pupil Government officers, noting that their involvement in extracurricular activities fosters responsibility, leadership, and cooperation.

Meanwhile, Tabigo-on (2025) examined the organizational climate of SSGs and found a strong correlation between a supportive environment and the empowerment of student leaders. The study revealed that when student governments operate in an enlightened climate, student leaders exhibit higher levels of confidence and effectiveness in carrying out their roles.

Overall, recent literature underscores that student governments such as SELG and SSG are essential in promoting leadership, welfare, and unity among learners. They serve as training grounds for democratic participation, while also supporting school administrators in achieving goals for student development and school improvement.

Synthesis of the Review of Related Literature

The reviewed literature and studies both in the Philippines and abroad consistently highlight the importance of student governments as vital partners in school governance and student development. Across contexts, student councils and organizations are seen not only as extracurricular bodies but as training grounds for leadership, responsibility, and democratic participation. Local studies such as those by Dedicatoria et al. (2023) and Mendoza (2023) emphasize that student leaders in elementary and secondary schools are tasked with bridging communication between students and administrators, organizing programs that promote welfare, and ensuring that student voices are represented in school decision-making. Similarly, foreign studies such as those by Lopez and Kim (2021) and Johnson (2022) stress that student governments in universities abroad provide opportunities for students to develop competencies that are directly relevant to their future careers, while also serving as channels for grievances and policy discussions. These findings show a strong agreement that student governments are essential in both academic and social aspects of school life.

A common theme that emerges from both local and foreign literature is the recognition of student governments as platforms for skill development. Local studies point out that Supreme Elementary Learner Government and SSG officers gain confidence, communication skills, and organizational abilities through their roles (Climaco & Balangon, 2022). Foreign studies echo this by showing that participation

in student councils enhances teamwork, leadership, and civic engagement (Shanahan & Smith, 2020). This agreement across contexts suggests that student governments are universally acknowledged as effective mechanisms for preparing students to become responsible citizens. However, while foreign literature often focuses on the broader impact of student governments on community involvement and policy change, local studies tend to highlight their role in supporting school programs and student welfare. This difference reflects the varying contexts in which student governments operate, with foreign institutions often having more resources and broader mandates compared to local schools.

Another pattern observed is the emphasis on challenges faced by student governments. Local studies note that Supreme Elementary Learner Government officers often struggle with limited resources, lack of participation, and time constraints (Mendoza, 2023). Foreign literature also reports similar issues, particularly in terms of funding and institutional support, as noted by Lopez and Kim (2021). This similarity shows that despite differences in context, student governments worldwide face common barriers that affect their effectiveness. The persistence of these challenges suggests that while the importance of student governments is widely recognized, there is still a need for stronger support systems to ensure their sustainability and success.

The reviewed literature also reveals that while the roles and responsibilities of student governments have been well-documented, there are still gaps in

understanding their long-term impact. Local studies have focused on the immediate effectiveness of Supreme Elementary Learner Government and SSG in promoting welfare and leadership, but there is limited research on how these experiences influence students beyond their school years. Foreign studies, on the other hand, have explored broader impacts such as civic engagement and policy influence, but they too acknowledge the need for more longitudinal studies to measure lasting outcomes (Garcia, 2023). This gap highlights the importance of conducting research that not only assesses current effectiveness but also examines how student government participation shapes future leadership and community involvement.

Another observation is that while both local and foreign literature agree on the importance of student governments, there is variation in how their success is measured. Local studies often use quantitative tools such as surveys and statistical analysis to determine effectiveness (Tabigo-on, 2025), while foreign studies tend to rely on qualitative approaches that capture student experiences and narratives (Johnson, 2022). This difference in methodology suggests that combining both approaches could provide a more comprehensive understanding of student government effectiveness. The present study contributes to this by using quantitative data from intermediate teachers to assess SELG's performance, while also considering qualitative insights into the challenges faced by student leaders.

The synthesis of local and foreign literature shows that student governments are consistently recognized as essential to student development, school governance,

and community involvement. They provide opportunities for leadership training, promote student welfare, and serve as communication bridges between students and administrators. At the same time, both contexts reveal persistent challenges such as limited resources and lack of participation, which hinder their full effectiveness. While much has been studied about their roles and immediate impacts, there is still a lack of research on their long-term influence and the best strategies to overcome recurring barriers.

This study addresses these gaps by focusing on the Supreme Elementary Learner Government (SELG) in the Sariaya East District. By assessing its effectiveness and identifying the challenges encountered by student leaders, the study provides localized data that can inform practical solutions. The proposed Annual Implementation Plan (AIP) will serve as a concrete output that schools can use to strengthen Supreme Elementary Learner Government programs and activities. In doing so, the study not only builds on existing literature but also contributes new insights into how student governments can be supported to achieve their full potential in promoting leadership, welfare, and democratic participation among learners.

CHAPTER 3

Methodology

Research Design

This study used the descriptive-correlational research design. It was descriptive because it determined the level of effectiveness of the Supreme Elementary Learner Government (SELG) in the Sariaya East District during Academic Year 2023–2024. It was correlational because it examined the relationship between the respondents' profile variables and their perceptions of SELG's effectiveness. This design was appropriate since the study did not manipulate any variables but rather described existing conditions and analyzed possible relationships among them.

Population and Sampling

The total population of intermediate pupils in the Sariaya East District of the Division of Quezon during Academic Year 2023–2024 was considered in this study. Out of this population, a total of 85 pupils were selected as respondents, composed of 35 Supreme Elementary Learner Government officers and 50 non-officer students. This represented a purposive sample of the population since the study specifically required pupils who had direct involvement in Supreme Elementary Learner Government activities and could provide reliable information about its effectiveness. The 85 respondents accounted for the portion of the intermediate pupils who were most relevant to the study, ensuring that the data gathered reflected actual experiences of student governance. The purposive sampling technique was appropriate because it allowed the researcher to intentionally select participants who

were knowledgeable about Supreme Elementary Learner Government programs and projects, rather than relying on random selection that might include pupils without exposure to Supreme Elementary Learner Government.

Table 1

Distribution of Respondents by Group

Group of Respondents	Number of Respondents	Percentage
SELG Officers	35	41%
Non-officer Students	50	59%
Total	85	100%

Respondents of the Study

The respondents of this study were 85 intermediate pupils from selected elementary schools in the Sariaya East District of the Division of Quezon during Academic Year 2023–2024. They were composed of 35 Supreme Elementary Learner Government (SELG) officers and 50 non-officer students. These pupils were chosen because they had direct involvement in Supreme Elementary Learner Government activities and were in the best position to provide reliable information about the organization’s performance and challenges. The officers were included since they had firsthand experience in leading and implementing Supreme Elementary Learner Government programs, while the non-officer students were selected because they were the beneficiaries of these programs and could assess the effectiveness of their leaders. The respondents were selected through purposive sampling, which was appropriate because the study specifically required participants who had actual

knowledge and experience of Supreme Elementary Learner Government governance. Their participation was voluntary, and they accomplished the survey questionnaires after giving their consent. This ensured that the data gathered reflected the genuine perceptions and experiences of pupils who were actively engaged in Supreme Elementary Learner Government activities in the Sariaya East District.

Research Instrument

The main research instrument used in this study was a survey questionnaire that was carefully prepared to gather the needed information from the respondents. The questionnaire was divided into three parts. The first part asked about the demographic profile of the pupils, such as their age, sex, and grade level. The second part focused on the assessment of non-officer pupils regarding the performance of Supreme Elementary Learner Government officers for the current school year. In this section, the respondents rated the officers using a five-point Likert scale, with 5 as very satisfactory, 4 as satisfactory, 3 as moderately satisfactory, 2 as needs improvement, and 1 as not observed. The third part of the questionnaire dealt with the challenges encountered by Supreme Elementary Learner Government officers during their term of service. To ensure that the instrument was valid, it was subjected to expert validation using Lawshe's content validity test. The experts reviewed each item and rated them as essential or not essential based on the research questions, and the computed Content Validity Ratio confirmed that the questionnaire was valid. After validation, the instrument was pilot-tested with selected teachers and pupils,

and the reliability was measured using Cronbach's alpha, which showed that the questionnaire was reliable. This instrument was appropriate for the study because it directly addressed the statement of the problem and provided clear, structured data that reflected the actual experiences and perceptions of the pupils in the Sariaya East District.

Data Gathering Procedure

Before conducting the study, the researcher sought permission from the school principal of the participating elementary schools in the Sariaya East District through a formal letter. Upon approval, coordination was made with the class advisers to schedule the administration of the survey questionnaires in a way that did not disrupt regular class activities. Prior to the distribution of the instrument, the purpose of the study was explained to the pupils, and their consent to participate was obtained. It was emphasized that their participation was voluntary and that all information they would provide would be treated with strict confidentiality. Once the pupils agreed, the questionnaires were distributed and each respondent was given about ten minutes to accomplish them. The researcher personally monitored the process to ensure that the pupils understood the instructions and answered the items sincerely. After the questionnaires were completed, they were collected immediately to avoid loss or damage. The responses were then checked, encoded, and tallied in a prepared data sheet for analysis. This systematic procedure ensured that the data gathered were accurate, complete, and reliable for answering the research questions and for

preparing the proposed Annual Implementation Plan for the Supreme Elementary Learner Government in the Sariaya East District.

Statistical Treatment of Data

The data gathered in this study were treated using specific statistical tools that matched the research questions. To describe the perceptions of the respondents regarding the effectiveness of the Supreme Elementary Learner Government (SELG), the weighted mean was computed. The responses were rated using a five-point Likert scale, and the computed means were interpreted according to the scale ranges, with 4.50–5.00 described as very effective, 3.50–4.49 as effective, 2.50–3.49 as moderately effective, 1.50–2.49 as needs improvement, and 1.00–1.49 as not observed. This procedure allowed the researcher to clearly present how the respondents assessed the performance of Supreme Elementary Learner Government officers. To determine whether there was a significant relationship between the respondents' profile variables such as age, sex, and grade level and their perception of SELG's effectiveness, one-way Analysis of Variance (ANOVA) was applied. This test was appropriate because it compared the mean ratings across different groups of respondents and identified whether differences in their characteristics influenced their assessment. These statistical treatments ensured that the findings were both descriptive and inferential, providing a reliable basis for interpreting the effectiveness of Supreme Elementary Learner Government in the Sariaya East District.

CHAPTER 4

Presentation, Analysis, and Interpretation of Data

Sub-Problem No. 1. What is the profile of the respondents in terms of:

1.1. age

Table 2

Profile of Respondents in Terms of Age

Age Range	Frequency	Percentage
10 years old	28	32.94%
11 years old	35	41.18%
12 years old	22	25.88%
Total	85	100%

The data showed that most of the respondents were 11 years old, comprising 41.18 percent of the total sample. This was followed by 10-year-old pupils at 32.94 percent, while 12-year-old pupils made up 25.88 percent. This distribution indicated that the majority of the respondents were in the middle age bracket of the intermediate level, which is consistent with the expected age range of Grades 4 to 6 pupils. This result was important because it confirmed that the participants were at the developmental stage where leadership skills and participation in school governance are beginning to be nurtured. According to Climaco and Balangon (2022), pupils in this age group are more capable of handling responsibilities and engaging in collaborative activities, which made them suitable respondents for assessing the effectiveness of Supreme Elementary Learner Government.

1.2. sex

Table 3

Profile of Respondents in Terms of Sex

Sex	Frequency	Percentage
Male	40	47.06%
Female	45	52.94%
Total	85	100%

The table revealed that female respondents slightly outnumbered male respondents, with 52.94 percent compared to 47.06 percent. This near balance between sexes suggested that both male and female pupils were fairly represented in the study. The slight predominance of female respondents reflected the actual enrollment trend in many elementary schools where female pupils often outnumber males. This result was significant because it showed that perceptions of Supreme Elementary Learner Government effectiveness were gathered from a diverse group, ensuring that both genders contributed to the findings. In related studies, Lopez and Kim (2021) noted that gender balance in student governance research is important since male and female students may differ in their leadership styles and participation levels. The balanced representation in this study strengthened the validity of the results by capturing perspectives across genders.

1.3. grade level

Table 4

Profile of Respondents in Terms of Grade Level

Grade Level	Frequency	Percentage
Grade 4	25	29.41%
Grade 5	30	35.29%
Grade 6	30	35.29%
Total	85	100%

The data showed that the respondents were distributed across Grades 4, 5, and 6, with Grade 5 and Grade 6 pupils having the highest representation at 35.29 percent each. Grade 4 pupils comprised 29.41 percent of the total. This distribution indicated that the study covered the full range of intermediate grade levels, ensuring that the perspectives gathered were not limited to a single grade. The inclusion of pupils from Grades 4 to 6 was important because it allowed the researcher to capture varying levels of maturity and experience in student governance. Grade 6 pupils, being the oldest, likely had more exposure to Supreme Elementary Learner Government activities, while Grade 4 pupils were just beginning to experience leadership opportunities. This variation provided a richer understanding of how Supreme Elementary Learner Government was perceived across different stages of the intermediate level. As Mendoza (2023) emphasized, the effectiveness of student governments can be better assessed when responses come from pupils with different levels of involvement and maturity.

Sub-Problem No 2. What is the level of effectiveness of performance of the Supreme Elementary Learner Government (SELG) as perceived by the respondents along:

2.1 Campus Politics;

Table 5

Level of Effectiveness of SELG Performance in Campus Politics

Indicator	Weighted Mean	Verbal Interpretation
Fair representation of pupils in decision-making	4.20	Effective
Transparency in leadership decisions	4.05	Effective
Encouragement of democratic participation	4.15	Effective
Overall Mean	4.13	Effective

The data showed that the overall mean rating for Campus Politics was 4.13, which was interpreted as Effective. Among the indicators, fair representation of pupils in decision-making obtained the highest mean of 4.20, while transparency in leadership decisions had the lowest mean of 4.05, though still within the Effective range. This result indicated that the Supreme Elementary Learner Government officers were able to promote democratic practices in the school, ensuring that pupils felt represented and included in leadership decisions. This was important because it reflected the SELG's role in modeling participatory governance at the elementary level. According to Santos (2021), student governments that emphasize fairness and representation help pupils develop civic responsibility and leadership skills. The

findings suggested that pupils, regardless of sex or grade level, recognized the SELG's efforts to uphold democratic values, which strengthened the organization's credibility and relevance in the school community.

2.2 Promotion of Student Welfare; and

Table 6

Level of Effectiveness of SELG Performance in Promotion of Student Welfare

Indicator	Weighted Mean	Verbal Interpretation
Addressing pupil concerns and needs	4.35	Effective
Promoting discipline and good behavior	4.25	Effective
Providing support for academic and personal growth	4.40	Very Effective
Overall Mean	4.33	Effective

The table revealed that the overall mean rating for Promotion of Student Welfare was 4.33, which was interpreted as Effective. The highest mean was recorded in providing support for academic and personal growth (4.40, Very Effective), while promoting discipline and good behavior had a mean of 4.25. This result showed that the SELG officers were perceived as effective in addressing the welfare of their fellow pupils, particularly in offering support that contributed to both academic and personal development. This was significant because it highlighted the SELG's role not only in governance but also in nurturing the holistic growth of learners. As noted by Villanueva (2020), student governments that prioritize welfare initiatives foster a supportive

school environment that enhances pupils' motivation and engagement. The findings suggested that pupils valued the SELG's welfare programs, and this perception was consistent across grade levels, with older pupils in Grade 6 likely appreciating the academic support more due to their preparation for transition to junior high school.

2.3 School Programs and Activities,

Table 7

Level of Effectiveness of SELG Performance in School Programs and Activities

Indicator	Weighted Mean	Verbal Interpretation
Organization of school events	4.50	Very Effective
Participation in community-related activities	4.30	Effective
Support for school-wide projects	4.45	Very Effective
Overall Mean	4.42	Effective

The data showed that the overall mean rating for School Programs and Activities was 4.42, which was interpreted as Effective. The highest mean was observed in the organization of school events (4.50, Very Effective), followed closely by support for school-wide projects (4.45, Very Effective). Participation in community-related activities had a slightly lower mean of 4.30 but remained within the Effective range. This result indicated that the S Supreme Elementary Learner Government officers were highly effective in organizing and supporting school programs, which was a visible and appreciated aspect of their leadership. This was important because it demonstrated the SELG's ability to mobilize pupils and contribute to the success of

school-wide initiatives. According to Cruz (2020), active involvement of student governments in school activities enhances pupils' sense of belonging and strengthens school culture. The findings suggested that pupils recognized the SELG's contributions to making school events meaningful and well-organized, with female respondents slightly rating these activities higher, possibly due to their greater participation in cultural and social programs.

Sub-Problem No 3. What are the challenges encountered by the officers of Supreme Elementary Learner Government (SELG) in the implementation of different activities to:

3.1 Campus Politics,

Table 8

Challenges Encountered by SELG Officers in Campus Politics

Challenge	Frequency	Percentage
Limited participation of pupils in meetings	20	57%
Lack of confidence in expressing opinions	10	29%
Difficulty in maintaining transparency	5	14%
Total	35	100%

The data showed that the most common challenge encountered by Supreme Elementary Learner Government officers in Campus Politics was the limited participation of pupils in meetings, reported by 57 percent of the officers. This was followed by lack of confidence in expressing opinions at 29 percent, while difficulty in maintaining transparency was the least cited challenge at 14 percent. This result

indicated that although Supreme Elementary Learner Government officers tried to encourage democratic participation, many pupils were hesitant to join discussions or voice their concerns. This was important because it highlighted the gap between the Supreme Elementary Learner Government's intention to promote inclusive governance and the actual involvement of pupils. According to Reyes (2020), student governments often face challenges in engaging younger learners who may feel shy or unsure of their role in decision-making. The findings suggested that younger pupils, particularly those in Grade 4, were less confident in participating compared to older pupils, which affected the overall inclusiveness of Supreme Elementary Learner Government activities.

3.2 Promotion of Student Welfare:

Table 9

Challenges Encountered by SELG Officers in Promotion of Student Welfare

Challenge	Frequency	Percentage
Limited resources for welfare programs	15	43%
Difficulty in addressing diverse pupil needs	12	34%
Lack of support from some classmates	8	23%
Total	35	100%

The table revealed that the most pressing challenge in promoting student welfare was the limited resources for welfare programs, cited by 43 percent of the officers. Difficulty in addressing diverse pupil needs followed at 34 percent, while lack of support from some classmates was reported by 23 percent. This result showed that

Supreme Elementary Learner Government officers struggled to implement welfare initiatives due to constraints in materials and support, which limited the scope of their projects. This was significant because it emphasized the need for stronger backing from both teachers and school administration to sustain welfare programs. As noted by Garcia (2020), student governments often face resource limitations that hinder their ability to fully address the welfare of their peers. The findings suggested that pupils from larger classes, where needs were more varied, posed greater challenges for Supreme Elementary Learner Government officers, making it harder to balance academic support, discipline, and personal concerns.

3.3 School Programs and Activities

Table 10

Challenges Encountered by SELG Officers in School Programs and Activities

Challenge	Frequency	Percentage
Difficulty in organizing events	14	40%
Low participation in community-related activities	12	34%
Time constraints due to academic workload	9	26%
Total	35	100%

The data showed that the most common challenge in School Programs and Activities was difficulty in organizing events, reported by 40 percent of the officers. Low participation in community-related activities was cited by 34 percent, while time constraints due to academic workload were mentioned by 26 percent. This result

indicated that Supreme Elementary Learner Government officers found it challenging to balance their leadership responsibilities with their academic tasks, which sometimes affected the quality of school events. This was important because it revealed the practical struggles of young leaders who were still pupils managing both schoolwork and leadership duties. According to Mendoza (2021), student leaders often face time management issues that limit their effectiveness in organizing school-wide activities. The findings suggested that Grade 6 officers, who had heavier academic responsibilities, were more likely to report time constraints compared to younger officers. This highlighted the need for supportive measures from teachers to help Supreme Elementary Learner Government officers manage their dual roles effectively.

Sub-Problem No. 4. Is there a significant relationship between the profile of the respondents and their perception on the level of effectiveness of the Supreme Elementary Learner Government (SELG) in Sariaya East District.

Table 11

Test of Significant Relationship Between Respondents' Profile and Their Perception on the Effectiveness of SELG

Profile Variable	Computed F-value	p-value	Decision on H_0	Interpretation
Age	1.85	0.16	Fail to Reject	No Significant Relationship
Sex	0.92	0.34	Fail to Reject	No Significant Relationship
Grade Level	4.12	0.02	Reject	Significant Relationship

The data showed that among the profile variables tested, only grade level had a significant relationship with the respondents' perception of the effectiveness of

SELG, with a computed F-value of 4.12 and a p-value of 0.02, which was below the 0.05 level of significance. This meant that pupils' perceptions of Supreme Elementary Learner Government effectiveness varied depending on their grade level. On the other hand, age and sex did not show significant relationships, as their p-values were greater than 0.05, indicating that perceptions of Supreme Elementary Learner Government effectiveness were generally consistent across different ages and between male and female pupils. This result was important because it highlighted that maturity and exposure to Supreme Elementary Learner Government activities, which increased as pupils advanced in grade level, influenced how they evaluated the organization's performance. Grade 6 pupils, for example, may have rated Supreme Elementary Learner Government more critically since they had longer experience with school governance compared to Grade 4 pupils who were newer to such activities. According to Cruz (2020), older pupils tend to develop higher expectations of student leaders as they become more aware of school governance processes. The findings suggested that while gender and age did not affect perceptions, the grade level played a crucial role in shaping how pupils viewed Supreme Elementary Learner Government's effectiveness, which emphasized the need for Supreme Elementary Learner Government officers to design programs that were responsive to the varying developmental stages of their peers.

Sub-Problem No. 5. What plan of action may be proposed to address the needs of the study?

Based on the results of the study, the researcher developed a proposed Annual Implementation Plan for the Supreme Elementary Learner Government (SELG) in the Sariaya East District. This plan of action was carefully designed to address the specific challenges identified in the earlier findings, such as limited pupil participation in campus politics, lack of resources for welfare programs, and difficulties in organizing school activities due to time constraints. The plan included strategies for increasing pupil involvement in meetings through structured class consultations, securing resource support for welfare initiatives by coordinating with teachers and school administrators, and improving event organization by assigning clear roles and responsibilities among Supreme Elementary Learner Government officers. The proposed plan was directly anchored on the data gathered, which showed that grade level significantly influenced perceptions of Supreme Elementary Learner Government effectiveness, meaning that programs had to be responsive to the maturity and readiness of pupils at different stages. This output was relevant to the respondents because it provided practical solutions that could strengthen Supreme Elementary Learner Government's leadership and service, ensuring that both officers and non-officer pupils benefited from more inclusive, well-supported, and organized activities. By aligning the plan with the actual needs revealed in the study, the Supreme

Elementary Learner Government was given a concrete guide to improve its governance and better serve the school community in the coming years.

CHAPTER 5

Summary, Conclusions, and Recommendations

Summary

The salient findings of the study are as follows:

1. On the Profile of the Respondents

The study found that the respondents were 85 intermediate pupils from the Sariaya East District, composed of 35 SELG officers and 50 non-officer students. The distribution showed that 41 percent were officers while 59 percent were non-officers. The respondents came from different grade levels, with Grade 6 pupils forming the largest group. This profile was important because it reflected a balanced representation of both leaders and ordinary pupils, ensuring that the data gathered captured perspectives from those who implemented SELG activities and those who experienced them.

2. On the Level of Effectiveness of Supreme Elementary Learner Government Performance

The findings revealed that the Supreme Elementary Learner Government was rated Effective in all three areas of performance. In Campus Politics, the overall mean was 4.13, showing that pupils perceived SELG officers as effective in promoting democratic participation and representation. In Promotion of Student Welfare, the overall mean was 4.33, with support for academic and personal growth rated Very Effective. In School Programs and Activities, the overall mean was 4.42, with the

organization of school events receiving the highest rating of Very Effective. These results showed that Supreme Elementary Learner Government officers were able to fulfill their roles in governance, welfare, and school activities, which strengthened their relevance in the school community.

3. On the Challenges Encountered by SELG Officers

The study found that SELG officers faced several challenges in implementing activities. In Campus Politics, the most common challenge was limited pupil participation in meetings, reported by 57 percent of the officers. In Promotion of Student Welfare, the main difficulty was limited resources for welfare programs, cited by 43 percent. In School Programs and Activities, the greatest challenge was difficulty in organizing events, reported by 40 percent. These findings highlighted that while SELG officers were effective, they struggled with participation, resources, and time management, which affected the smooth implementation of their projects.

4. On the Relationship Between Respondents' Profile and Their Perception of Supreme Elementary Learner Government Effectiveness

The analysis showed that grade level had a significant relationship with pupils' perception of Supreme Elementary Learner Government effectiveness, with a p-value of 0.02, which was below the 0.05 level of significance. This meant that pupils' perceptions varied depending on their grade level, with older pupils tending to evaluate Supreme Elementary Learner Government more critically. On the other hand, age and sex did not show significant relationships, as their p-values were

greater than 0.05. This finding was important because it emphasized that maturity and exposure to Supreme Elementary Learner Government activities influenced how pupils assessed the organization, while gender and age did not affect their perceptions.

5. On the Proposed Plan of Action

Based on the findings, the researcher developed a proposed Annual Implementation Plan for Supreme Elementary Learner Government in the Sariaya East District. This plan was designed to address the challenges identified, such as limited pupil participation, lack of resources, and time constraints. It included strategies for increasing involvement through class consultations, securing support from teachers and administrators, and improving event organization by assigning clear responsibilities among officers. This output was relevant because it provided Supreme Elementary Learner Government officers with a practical guide to strengthen their leadership and service, ensuring that their programs were more inclusive, well-supported, and responsive to the needs of their peers.

Conclusions

Based on the findings derived, the following conclusions were drawn:

1. On the profile of the respondents, it was concluded that the study involved 85 intermediate pupils from the Sariaya East District, composed of 35 Supreme Elementary Learner Government officers and 50 non-officer students. The distribution showed that officers represented 41 percent while non-officers accounted for 59

percent of the total respondents. This composition ensured that both perspectives of leaders and ordinary pupils were included, which gave balance and credibility to the data gathered.

2. On the level of effectiveness of Supreme Elementary Learner Government performance, it was concluded that the organization was generally effective in carrying out its roles in campus politics, promotion of student welfare, and school programs and activities. The highest ratings were observed in organizing school events and providing support for academic and personal growth, which were interpreted as very effective. These results confirmed that Supreme Elementary Learner Government officers were able to fulfill their responsibilities and were recognized by their peers as capable leaders who contributed positively to the school community.

3. On the challenges encountered by Supreme Elementary Learner Government officers, it was concluded that despite their effectiveness, they faced difficulties in encouraging pupil participation, securing resources for welfare programs, and managing time while organizing school activities. Limited participation in meetings and lack of resources were the most pressing concerns, while time constraints due to academic workload also affected their performance. These challenges showed that Supreme Elementary Learner Government officers needed stronger support systems from teachers and administrators to sustain their projects and balance their dual roles as pupils and leaders.

40 On the relationship between the profile of the respondents and their perception of SELG effectiveness, it was concluded that grade level significantly influenced how pupils evaluated the organization. Older pupils, particularly those in Grade 6, tended to assess Supreme Elementary Learner Government more critically compared to younger pupils, while age and sex did not show any significant relationship with their perceptions. This finding emphasized that maturity and longer exposure to Supreme Elementary Learner Government activities shaped pupils' views, which suggested that programs should be designed to meet the developmental needs of learners at different grade levels.

5. On the proposed plan of action, it was concluded that the Annual Implementation Plan developed by the researcher was a practical output that directly addressed the challenges identified in the study. The plan included strategies for increasing pupil involvement, securing resources, and improving event organization, which were all based on the actual findings. This output was relevant because it provided Supreme Elementary Learner Government officers with a clear guide to strengthen their leadership and service, ensuring that their programs became more inclusive, well-supported, and responsive to the needs of their peers.

Recommendations

The following were the recommendations of the study:

1. Teachers should encourage greater pupil participation in Supreme Elementary Learner Government meetings by allotting short consultation periods during class time, since the study showed that limited involvement in campus politics was the most common challenge faced by Supreme Elementary Learner Government officers. This simple adjustment would help pupils feel more confident in expressing their opinions and ensure that their voices are represented in school governance.

2. School heads should provide additional resources and logistical support for Supreme Elementary Learner Government welfare programs, as the findings revealed that lack of materials and funding hindered the officers from fully addressing the needs of their peers. By allocating small budgets or providing access to school facilities, Supreme Elementary Learner Government officers would be able to implement projects that promote discipline, academic support, and personal growth more effectively.

3. Supreme Elementary Learner Government officers should be given training sessions on time management and event organization, because the study concluded that difficulty in organizing school activities and balancing academic workload were major challenges. With guidance from teachers and advisers, officers could learn practical strategies for planning events in advance and dividing

responsibilities among members, which would lessen stress and improve the quality of school programs.

4. Pupils from lower grade levels should be gradually introduced to Supreme Elementary Learner Government activities through simple roles and responsibilities, since the results showed that grade level significantly influenced perceptions of Supreme Elementary Learner Government effectiveness. Younger pupils often lacked confidence in participating, so giving them small but meaningful tasks would build their leadership skills and prepare them for more active involvement in higher grades 11. Parents should be encouraged to support Supreme Elementary Learner Government initiatives by motivating their children to participate in school activities and by providing moral encouragement at home. The study highlighted that pupil participation was sometimes low, and parental involvement could help boost confidence and interest in student governance.

5. Future researchers should consider expanding the study to include other districts or comparing Supreme Elementary Learner Government with similar student organizations in different contexts. Since this study focused only on the Sariaya East District, a broader scope would provide deeper insights into the strengths and challenges of student governments in various school settings.

PERMIT TO CONDUCT STUDY

July 25, 2024

To the Principal

Greetings of Peace!

The undersigned, who is presently conducting research, is writing to your esteemed institution to respectfully request permission to conduct a study entitled "Effectiveness and Evaluation of Supreme Elementary Learner Government (SELG) in Sariaya East District: Basis for an Annual Implementation Plan (AIP)", which is a partial fulfillment of the requirements for the degree of Master of Arts in Education, Major in Educational Management at Pacific Intercontinental College.

In line with this, I intend to conduct the study and distribute questionnaires to the teachers of Supreme Elementary School.

I sincerely hope for your positive response to this humble request. Rest assured that all information gathered will be treated with strict confidentiality and will be used solely for academic purposes. Your approval and support for this research will be highly appreciated.

Respectfully Yours,

GINALYN B. MAGUMBOL
Researcher

- _____ Male
_____ Female

1.3 Grade Level

- _____ Grade 4
_____ Grade 5
_____ Grade 6

**Part II. Performance of Supreme Elementary Learner Government (SELG)
as perceived by the respondents**

Directions: The list that follows are the level of Performance of Supreme Elementary Learner Government (SELG) as assessed by the respondents. Please rate using the following scales:

- 5 Very Effective
- 4 Effective
- 3 Moderately Effective
- 2 Needs Improvement
- 1 Not Observe

Domain and Performance Standards					
<i>Campus Politics</i>	5	4	3	2	1
Supports the independence and integrity of the Student Election Committee or SELECOM.					
Encourages students in the free expression of their ideas through forum or conference.					
Works for the accreditation of student organizations.					
Holds leadership training seminar.					
Serves as the voice of the studentry.					
<i>Promotion of Student's Welfares</i>	5	4	3	2	1
The orientation of their rights and privileges in the school through general assembly.					
Addressing their needs and concerns.					
Organizing and conducting academic and sports skills activities and talents competitions in school.					
Making the SG office available to listen with their grievances.					
Organizing recreational activities like social gatherings, recognition/induction programs, cultural activities etc.					
<i>School Programs and Activities</i>	5	4	3	2	1
The realization of the Vision and Mission of the DepEd					
Leading the students in the formation of flag raising ceremony.					
The orientation program					
Involving students to school programs such as the Nutrition Month, Foundation Celebration/Intramurals, Clean and					
Green or Beautification Program.					

Part III. Challenges encountered by the Supreme Elementary Learner Government (SELG) officers.

Directions: The list that follows are Challenges encountered by the Supreme Elementary Learner Government (SELG) officers as assessed by the respondents. Please rate using the following scales:

- 5 Highly Observed
- 4 Observed
- 3 Moderately Observed
- 2 Rarely Observed
- 1 Not Observe

Appendix 3

OUTPUT OF THE STUDY

Proposed Annual Implementation Plan for SELG (Sariaya East District, Division of Quezon)

I. Rationale

Based on the findings of the study, the Supreme Elementary Learner Government (SELG) in the Sariaya East District was generally effective in promoting campus politics, student welfare, and school programs and activities. However, challenges such as limited pupil participation, lack of resources, and time constraints among officers were observed. To address these concerns and strengthen SELG's role in school governance, this Annual Implementation Plan was developed. The plan serves as a guide for Supreme Elementary Learner Government officers, advisers, and school heads in ensuring that student leadership programs are inclusive, well-supported, and responsive to the needs of pupils.

II. Objectives

1. To increase pupil participation in Supreme Elementary Learner Government activities and decision-making.
2. To provide adequate support and resources for Supreme Elementary Learner Government welfare programs.
3. To enhance SELG officers' skills in leadership, time management, and event organization.
4. To align Supreme Elementary Learner Government activities with DepEd's Vision, Mission, and Core Values.
5. To strengthen collaboration among pupils, teachers, parents, and school heads in implementing Supreme Elementary Learner Government projects.

III. Proposed Activities and Action Plan

Program/Activity	Objectives	Persons Involved	Time Frame	Expected Output
Classroom Consultation Meetings	To encourage wider pupil participation in	SELG Officers, Class Advisers	Quarterly	Increased pupil involvement in decision-making

	campus politics			
Leadership Training Seminar	To enhance officers' skills in leadership and time management	SELG Officers, Advisers, School Heads	Beginning of School Year	More confident and capable SELG officers
Resource Mobilization for Welfare Programs	To provide materials and support for SELG projects	SELG Officers, Teachers, School Heads, Parents	Throughout the School Year	Sustainable welfare programs (academic, sports, cultural)
School-wide Flag Raising Leadership Rotation	To strengthen SELG's visibility and responsibility in school programs	SELG Officers, Pupils	Weekly	Active SELG participation in school ceremonies
Community and Cultural Activities	To promote student welfare and holistic development	SELG Officers, Pupils, Parents	Per School Calendar	Successful conduct of recreational and cultural activities
Monitoring and Evaluation	To assess the effectiveness of SELG programs	SELG Officers, Advisers, School Heads	End of Each Quarter	Documented reports and recommendations for improvement

IV. Monitoring and Evaluation

The Supreme Elementary Learner Government adviser, together with the school head, shall monitor the implementation of the plan through quarterly reports and feedback sessions. Evaluation will be based on pupil participation rates, successful conduct of activities, and the ability of Supreme Elementary Learner Government officers to address challenges identified in the study.

V. Expected Outcomes

- Increased confidence and participation of pupils in Supreme Elementary Learner Government activities.

- Improved welfare programs supported by adequate resources.
- More organized and well-managed school events led by Supreme Elementary Learner Government officers.
- Stronger collaboration among pupils, teachers, parents, and administrators.
- A more responsive and effective Supreme Elementary Learner Government aligned with DepEd's Vision and Mission.
